

Virtual Rakhi Website Template by [@design.techie](#)

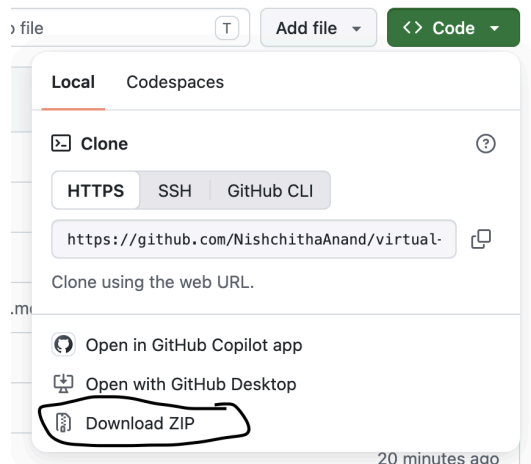

Live Demo: <https://virtual-rakhi-template.myartarya222.workers.dev/>

A personalized virtual Rakhi experience built with React, designed to turn childhood memories into an interactive digital surprise.

VS Code:

1. Download the Repository:

[Click here](#) to download the repo from the Github

2. Open the Project in VS Code:

UNZIP and Open the folder in VS Code, then run the below commands one after one:

```
npm install  
npm run dev
```

The terminal will show a local URL similar to:

<http://localhost:5173>

Open that link in your browser to see the Rakhi website.

Customize the Website:

1. Create Your Photos in ChatGPT:

Open ChatGPT and upload:

- The template image(template_photo.png) provided in the project folder (src/assets/template_photo.png)
- Your own photo

No need to add any prompt, just upload two images and send, this will generate a photo that matches the theme of the website.

Repeat this for all 4 photos.

2. Remove the Background:

After generating your images, remove their backgrounds using: remove.bg

(Note: You can also use any other background-removal tool you prefer. Make sure the final images have a transparent background (PNG).)

3. Replace the Photos

Do this for 4 images. Rename your final images exactly as:

photo1.png
photo2.png
photo3.png
photo4.png

Then replace the existing images inside:

src/assets/

Your folder should look like:

```
src/  
└── assets/  
    ├── photo1.png  
    ├── photo2.png  
    ├── photo3.png  
    └── photo4.png
```

Important: Keep the filenames exactly the same. This allows the website to automatically use your new photos without changing the code.

Customize the Rakhi Video:

If you would like to change the Rakhi video and create one with your brother's initials, follow these steps.

1.Create Your Custom Rakhi:

Open ChatGPT and upload: src/assets/template_rakhi.png

Prompt: Change the initials to "**YOUR INITIALS**", keep everything else the same.

2.Create the Hand + Rakhi Image:

Now take the "template_hand.png" image from the project folder -

src/assets/template_hand.png

(Note: You can use your brother's hand as well, but make sure it doesn't have any background)

Go back to ChatGPT and upload:

- Your newly generated Rakhi image
- template_hand.png

Prompt:

Create a photo of this exact hand wearing this Rakhi. Keep the hand and Rakhi design exactly the same.

You will now have an image of the hand wearing your customized Rakhi.

3.Create the Rakhi Video

Go to [Google Flow](#).

Upload the final image you created in the previous step.

Use this exact prompt:

Animate the exact hand and Rakhi shown in the reference. Do not redesign or regenerate the Rakhi. There is ONE Rakhi only. The Rakhi consists of one central decorative medallion positioned on the visible/top side of the wrist, with its existing red/gold threads extending around the wrist. During the entire video, only this single Rakhi exists. Do NOT create a second Rakhi medallion on the underside, back side, opposite side, or hidden side of the wrist. Do NOT mirror the Rakhi. Do NOT duplicate the Rakhi. Treat the Rakhi as a single physical object attached to the wrist. If the wrist moves, the exact same Rakhi moves together with it. Keep the central Rakhi medallion facing the camera exactly as shown in the reference. It should remain visible on the same side of the wrist throughout the animation. Animate only the hand with extremely

subtle natural movement: very slow gentle wrist movement, tiny natural finger movement, slight movement of the Rakhi threads caused by the wrist movement, no rotation that reveals the opposite side of the wrist, Do not rotate the wrist enough to expose the back/underside of the Rakhi. Keep the camera completely fixed. Preserve exactly: hand shape skin tone fingers Rakhi design Rakhi position Rakhi colors thread arrangement proportions composition No additional jewelry. No second Rakhi. No duplicated objects. No mirrored Rakhi. No new accessories. No Audio. No music The result should look like the original still image gently coming to life, rather than generating a new hand or new Rakhi. 4 seconds, vertical 9:16, locked camera, realistic photography, subtle motion, smooth cinematic movement.

4.Remove the Video Background

Once Google Flow generates the video:

Open the **Instagram Edits** app or **Inshots** to remove the video's background and use the **src/assets/background.png** image as a background.

5. Add the Video to Your Website

Rename the final video exactly:

rakhi-video.mp4

Then replace the existing video inside:

src/assets/rakhi-video.mp4

Important: Keep the filename exactly as rakhi-video.mp4

You don't need to change the code.

That's It!

Your Virtual Rakhi now has a personalized Rakhi with your brother's initials and hands.

Enjoy your customized Virtual Rakhi! 💜

Final Deployment - Share Your Rakhi

Once you've customized everything and tested your website, it's time to deploy it and share it with your brother.

1. Create a Netlify Account

Create a free account on: [Netlify](#). You can sign up using your GitHub account or email.

2. Manually Deploy Your Website

After logging in:

1. Go to your Netlify dashboard.
2. Choose **Add new project** → **Deploy manually**.

3. Change Your Domain Name

Once your site is deployed, Netlify will give you a temporary URL. Change the URL name as you want.

And finally... reveal the surprise. 🥺❤️
